

Urgent Message from **JOEL DEJEAN**

LaRouche Independent Candidate for Congress, TX-38th

“Scrap the Windmills! Light Up the World with Peaceful Nuclear Power.”

“My name is Joel Dejean. I want to warn the City Council and the Mayor to avoid the suicide pact known as the Green New Deal, the Great Reset. Houston, the energy capital of the world, is in the crosshairs.... If we eliminate natural gas turbines, coal plants, and nuclear plants, and depend on windmills, which have an availability of less than 40%; and solar panels, with an availability of less than 25%—we’ll be heading for brownouts and blackouts. What we should be doing is mass producing small modular nuclear reactors, 70-200 MW....” Joel Dejean, addressing the Houston City Council and Mayor Sylvester Turner on February 9, 2021, **five days before the polar vortex descended on Texas, incapacitating the windmills and causing the death of hundreds of Texans from hypothermia, carbon monoxide poisoning and related causes due to the failure of the electrical grid.**

With the Federal Reserve having inflated the U.S. dollar into near oblivion with mega-trillions in 0% bailouts, and the U.S. Congress squandering tens of billions to export lethal weapons for proxy wars against Russia, (and soon, perhaps, China), team Biden, Chuck Schumer et al, now give us an "An Inflation Reduction Act"! At the center of this is \$370 billion for 'green' projects. And for Texas? The most insanely wasteful, expensive and useless boondoggle of them all, two mega wind farms, larger than the City of Houston, in the Gulf of Mexico, off the coasts of Galveston, and Port Arthur. These projects, if completed, would guarantee permanent energy scarcity for our region. They would suck trillions of dollars from public and private coffers down a bottomless sinkhole, creating debt obligations that will never be retired. When the windmills fail, as they certainly will, under conditions of extreme heat or chill, or wind conditions too turbulent, or too slow, the costs of standby electricity will soar. But, be forewarned. These projects, projected for completion in at least ten years, may **never** produce a single watt of electricity! What, then, is the real intention behind 'Joe Blow's' windmill projects?

There is not a molecule of scientific truth to the oft-repeated scare tale about carbon dioxide wrecking global climate. That **CO2 BIG LIE** has been refuted by thousands of credentialed climatologists, weathermen, and physical scientists more honest and capable than the billionaires, financial managers and titled royalty who, for decades, have concocted and financed the anti-scientific 'consensus' regarding climate change. Their self-image is that of rageful Zeus in the Aeschylus tragedy 'Prometheus Bound'. Zeus condemns mankind to darkness, misery and early death, without the

command of fire. The modern 'green' Olympians thunder down from Davos, Jackson Hole and the City of London that we must turn out the lights on industrial civilization and accept increasing poverty and darkness, while paying endless carbon penalty tributes to the Olympian gods. The productive farmers, ranchers and energy producers, who sustain human life and improve upon nature through their labors, are sacrificed on the altar of 'net zero'. Green finance kills the physical economy which requires dense energy to thrive and grow, to feed a speculative cancer which is now consuming its host. Much of the world sees through the hypocrisy of all this, and is moving on, even exiting the dollar system altogether.

Speaking at an online seminar July 28th, LaRouche Independent candidate Joel Dejean questioned the folly of the wind farms in west Texas: *"Why has this been pushed? And it's been pushed by Republicans in the State of Texas -- George W. Bush, Enron, Rick Perry, Greg Abbott!...Why has this been promoted and pushed?"* Access the webcast video, with candidate **Joel Dejean** and Houston meteorologist **Dr. Neil Frank** on JoelDejeanforCongress.com.

*for Wind turbines: all Canada and contiguous United States
for Solar panels: all of United States, west of the Mississippi
for Nuclear: Queens and Bronx boroughs in New York*

Why indeed? Texas' two nuclear power facilities, Comanche Peaks near Glen Rose and the South Texas Project in Matagorda, produce between them 3,125 MW of continuous, clean, reliable energy from complexes covering about 22,000 acres. Wind turbines, contrarily, produce diffuse and highly interruptible power, dependent on fickle fluctuations of the weather. For an equivalent energy output, the 7 MW turbines, generously estimated to deliver 50% of rated capacity, would require about 900 windmills, spread out over 430 square miles, on land or sea.

When the wind stops blowing, you will sweat in the summer, and freeze in the winter, and you will still pay, pay, pay. *Why not scrap the windmill plan and commit Texas to massively expand peaceful nuclear energy?*

The Nuclear Regulatory Commission has just approved the NuScale modular reactor which can be assembled in multiple units for a fraction of what will be squandered on these interruptible. There are now 55 nuclear energy projects underway in the world today -- in China, in Russia, Egypt, Turkey, the UAE, and more -- but only two in the USA. That must change. Intense nuclear energy can move mountains, desalinate water, power the big projects to build our nation and the world. Feeble wind energy can do none of that.

Estimates are that the Great Gulf Wind Farms will take ten years to complete before they start cranking out useful energy. Chuck Schumer's "anti-inflation" farce is generously offering hundreds of billions in federal honey money to sweeten the way for private and developers to jump in. But once the projects commence, *the risk is entirely upon the private developers*. Ten years plus, with no return on investment. What will happen in those ten years?

Inflation will increase and supply chains will shrink. As surely as the West's anti-Russia sanctions have boomeranged back to destroy Europe, so will the Federal Reserve's tightening of credit to "combat inflation" (*which it created through 12+ years of market bailouts!*) will have the exactly opposite effect. Delayed job completion, components unavailable, or worse. The same vulture financiers who denied credit for your oil and gas projects, and lent only "green", will gladly grab your assets -- **including your carbon assets!** -- at the bankruptcy auction. Ask the farmers and ranchers who are being forced under by the 'green' takedown of food production. Food shortages, exorbitant and unreliable energy. The consequence of all this is DEPOPULATION. **That is also the intention.**

The green agenda is hastening the demise of the dollar system itself. When the Franklin Roosevelt coalition established the regulated Bretton Woods System at the end of World War II, the USA was the unchallenged industrial powerhouse of the world. Our mission was to become the engine of world development after the demise of the old Empires. After President Nixon killed Bretton Woods in 1971, decades of 'deregulation'-- of finance, of transportation, of utilities (thank you, Enron), have looted our industrial core in exchange for short-term profits. Economist Lyndon LaRouche forecast Nixon's action before it occurred, and the killing consequences spread out over generations. He also charted a way forward for civilization, and recruited a movement to bring that positive redirection of civilization to life. How might we reverse all this, and restore that mission?

Quoting Lyndon LaRouche from a speech in 2012:

"Dump the Green policy, which is presently the greatest single threat to humanity, that's a killer! And we have to understand that it is the increase of man's intelligence, which

means also scientific intelligence, the ability to create, the ability to generate higher energy-flux densities per capita and per square kilometer of territory— these are the standards on which credit is generated."

Against the pagan old monied Olympians, candidate Joel Dejean is in the solid tradition of **Prometheus**, who 'stole fire from the gods' to save mankind from extinction. For decades, Joel worked with American physical economist Lyndon LaRouche on advancing the scientific breakthroughs to achieve commercial thermonuclear fusion, to thereby bring under man's dominion the power of the stars to improve life on planet Earth. As an electrical engineer, specializing in infrared detection and targeting systems, Joel studied directly the 'greenhouse effect', which moderates Earth's climate through the dispersing of **water vapor** -- not carbon dioxide! He dedicates his Congressional campaign to wresting Texas and the nation free from the anti-human agenda of green fascism.

Said Joel at the July 28th online forum with Dr. Neil Frank: *"All we have to do is go back to the policies that built this country. Beside the Apollo program, if you look at the reaction to the spectacular images coming from the James Webb telescope, which took 25 years to put up into space, involved 20,000 scientists and engineers, fourteen countries, a real collaborative effort -- it's a spectacular success! If you look at the images of these galaxies, we have literally trillions of galaxies, each one with over 100 billion stars, each one of these stars is a fusion reactor! So, who could say that there is a limit to growth -- that we just have to live on this small planet, and just deal with the resources we have here? We have infinite resources, and the greatest resource we have is our creative intelligence. So, if you look at the potential, we have to scrap this whole idea of renewable energy. It's not net zero -- it's net negative! We have to continue to use fossil fuels -- gas turbines, bring back the coal plants. Any transition must go toward a higher energy flux density -- small modular nuclear reactors, and eventually, fusion. I made a proposal about a year and a half ago that one of the best things the U.S. could do for poor countries like Haiti is help them transition from charcoal power to fusion power. That would be the kind of foreign policy that would win friends all over the world. We can collaborate with China, with Russia, with India -- all the nations of the world. Because with two trillion galaxies, there's no reason to fight over pieces of dirt here on planet Earth."*
